(f)	Net Credit Sales / Average Trade Receivables	Trade Receivables Turnover Ratio	97.16%	92.12%	5%
(g)	Net Credit Purchases / Average Trade Payables	Trade Payables Turnover Ratio	351.37%	63.09%	457%

(j)	EBITDA / Capital Employed	Return on Capital Employed	11.98%	16.21%	-26%

Reasons for Variances of more than 25%

(a) The Current Ratio improved versus the prior period due to a rise in current assets, largely on account of increased trade receivables and unbilled revenue recognised from additional civil work orders, and higher EMD with government entities arising from expanded operations. Current liabilities increased marginally; however, the relative growth in current assets led to the net improvement in liquidity.

(b) There were no borrowings in comparable period

(C) There were no borrowings in comparable period

(d) There are no changes in Inventory in the current period, hence the is ratio is not applicable for the current period.

(g) Significant increase in operations considering the comparable period due to which there is such variance, kindly also note the laboratory TRL-9 has commenced it operations in current period.

(i) The Net Profit Ratio decreased to 17.66% in H1 FY26 from 25.95% in H1 FY25. The decline reflects commissioning costs and ramp-up of the newly operational TRL-9 laboratory, which increased direct and employee costs, together with higher depreciation and finance costs arising from significant capitalisation in the period. Although revenue increased, the combined impact of higher operating expenses and non-operating charges reduced the margin.

(j) ROCE decreased to 11.98% from 16.21% . This was driven by a substantial increase in capital employed following heavy capital expenditure to commission TRL-9, while EBIT was impacted by start-up costs and an elevated depreciation charge during the period. As the laboratory reaches steady state and utilisation improves, ROCE is expected to recover.

Reasons for Variances of more than 25%

(a) The Current Ratio improved versus the prior period due to a rise in current assets, largely on account of increased trade receivables and unbilled revenue recognised from additional civil work orders, and higher EMD with government entities arising from expanded operations. Current liabilities increased marginally; however, the relative growth in current assets led to the net improvement in liquidity.

(b) There were no borrowings in comparable period

(C) There were no borrowings in comparable period

(d) There are no changes in Inventory in the current period, hence the is ratio is not applicable for the current period.

(g) Significant increase in operations considering the comparable period due to which there is such variance, kindly also note the laboratory TRL-9 has commenced it operations in current period.

(i) The Net Profit Ratio decreased to 17.66% in H1 FY26 from 25.95% in H1 FY25. The decline reflects commissioning costs and ramp-up of the newly operational TRL-9 laboratory, which increased direct and employee costs, together with higher depreciation and finance costs arising from significant capitalisation in the period. Although revenue increased, the combined impact of higher operating expenses and non-operating charges reduced the margin.

(j) ROCE decreased to 11.98% from 16.21% . This was driven by a substantial increase in capital employed following heavy capital expenditure to commission TRL-9, while EBIT was impacted by start-up costs and an elevated depreciation charge during the period. As the laboratory reaches steady state and utilisation improves, ROCE is expected to recover.
